

Up to

25% More Power.

Guaranteed.

Unlike other "high-energy" batteries that rely solely upon higher gravity acid to deliver higher output, ENERGY-PLUS™ batteries use additional full-size plates in a balanced electrolyte to produce higher sustained voltages and longer run times - without sacrificing longevity. ENERGY-PLUS batteries provide up to 25% more energy than conventional batteries without an increase in tray size.

ENERGY-PLUS provides up to 25% more usable power than conventional batteries, based on research done in real-world conditions.

In the course of a shift, that means your trucks move faster, work longer without recharging, and experience less motor wear caused by excessive amp draw.

So long after other batteries are dead and gone, ENERGY-PLUS keeps going. And this extra performance is guaranteed in writing.
