Energy-Plus & Powerline FAST TRAK™ Batteries by Hawker Designed for Fast Charging

FAST TRAK™ batteries are specifically designed for use with most rapid chargers.

FAST TRAK™ batteries use these specialized components to accommodate the higher currents or rapid charging:

- Double-thick inter-cell connectors for better current distribution. FAST TRAK™ connectors are the thickest in the industry.
- Dual heavy-duty 2/0 or 4/0 cables and an SBX 350 amp connector that ensure your FAST TRAK™ batteries are equipped to handle the higher current levels.
- An adapter cable to join the dual cables into a single cable to connect to your truck. (Adapter cables come standard in 36" lengths for Class III trucks and 90" for Class I and II trucks, unless otherwise specified.)

Energy-Plus & Powerline FAST TRAK™ batteries have a three (3) year limited warranty when properly applied, maintained and used on an approved rapid charger.

Check with your local Hawker Representative for approved rapid chargers.
