# WATER. ANYTIME.

## In 1 Minute or Less!

**BATTERY WATERING TECHNOLOGIES**

No more wondering and worrying about **WHEN** to water your battery. With Battery Watering Technologies exclusive single-point system, **operators can fill their battery whenever they want with no risk of overfilling\***. If you have a cell failure because of watering, we'll replace it.

**GUARANTEED.**

\*No risk as long as it is paired with the proper valve for your battery. Forklift batteries typically need watering about once a week when used every day. Batteries that have been in use for an extended period of time, or are reconditioned, should be checked after every five charges.
